

Meeting 2 Attendance

https://tinyurl.com/aisocmeet2

Speed Friending !!!

- Half of the group is seated, and the other half of the group is rotating. Every 5 minutes or so, the rotating group will move to another seated person
- During these intervals, each pair of people will get the opportunity to talk, develop a connection and possibly even spark a friendship

What sparked your interest in artificial intelligence?

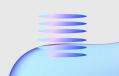

What ethical considerations do you think are most important when it comes to AI development and use?

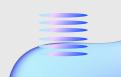

If you could create any AI-powered invention, what would it be?

Do you believe AI will ever achieve human-level consciousness, and why or why not?

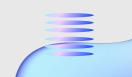

Do you believe AI will ever achieve human-level consciousness, and why or why not?

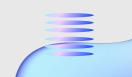

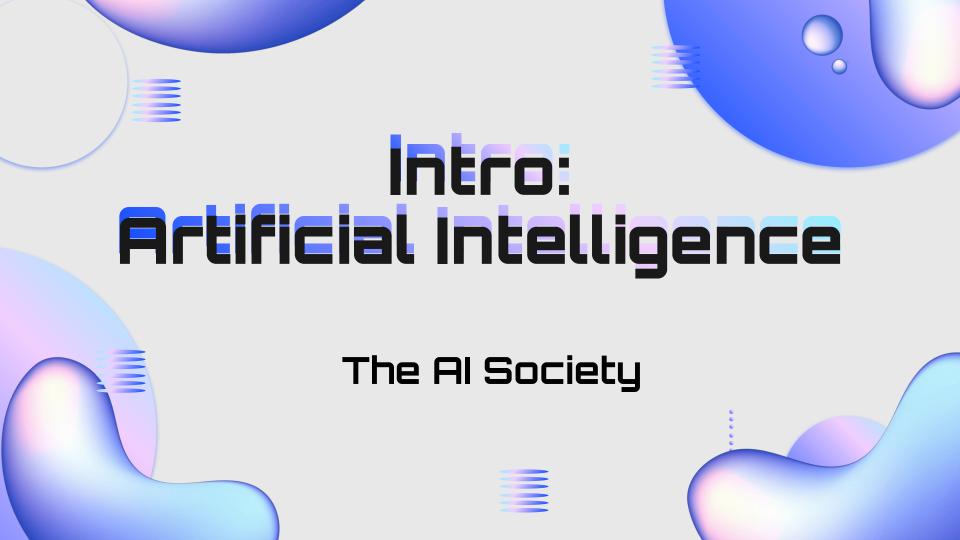

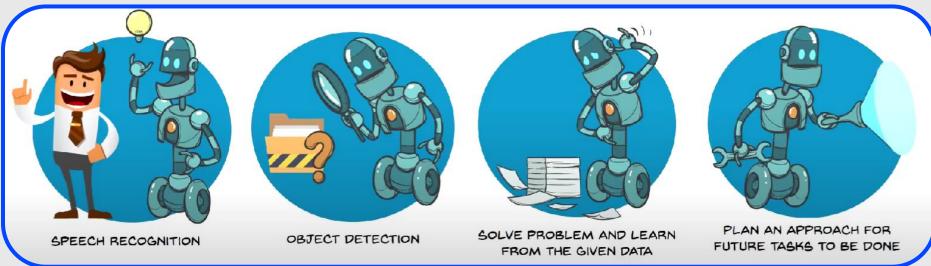

HOW AI IS USED...

- AI is a form of Computer Science used to create intelligent machines that can recognize human speech, objects, can learn, plan & solve problems like human

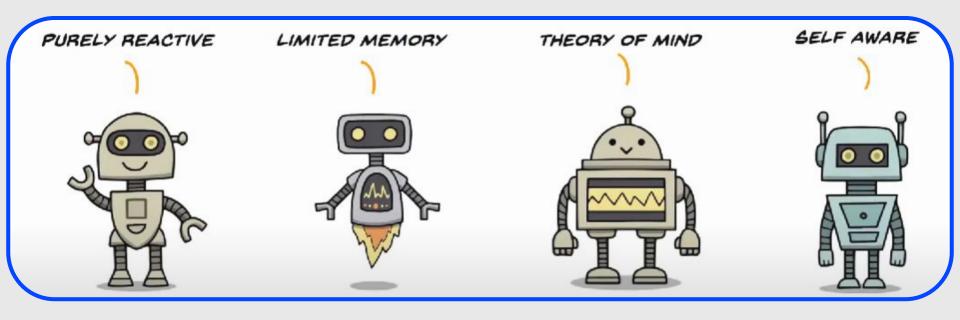

Types of Artificial Intelligence

0°

- Does not have any past memory or data to work with.
- Takes actions/reacts based on what it sees and only specializes in one field.

- These machines use previous data & keep adding it to their memory
 - It has enough memory or experience to make proper decisions

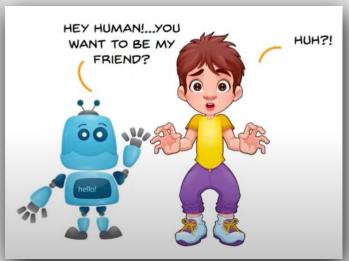

- Has the capacity to understand thoughts & emotions & interact socially
 - A machine based on this type is yet to be built properly

- This is the future generation of machines

Terminator

Ultron

Vision from Avengers

VIRTUAL ASSISTANTS

SIRI, CORTANA, ALEXA AND GOOGLE NOW USE VOICE RECOGNITION TO FOLLOW THE USER'S COMMAND.

BANKING - FRAUD DETECTION

FROM A LARGE DATA CONSISTING OF FRAUDULENT AND NON FRAUDULENT TRANSACTIONS, THE AI LEARNS TO PREDICT IF A NEW TRANSACTION IS FRAUD OR NOT

USING ML ALGORITHMS AND A LOT OF SAMPLE DATA, AI CAN BE USED TO DETECT ANOMALIES, ADAPT AND RESPOND TO THREATS

ONLINE CUSTOMER SUPPORT

MOST OF THE CUSTOMER SUPPORT IS NOW BEING AUTOMATED BY ARTIFICIAL INTELLIGENCE

Future of Al

APPLIANCES WILL BE RUN BY

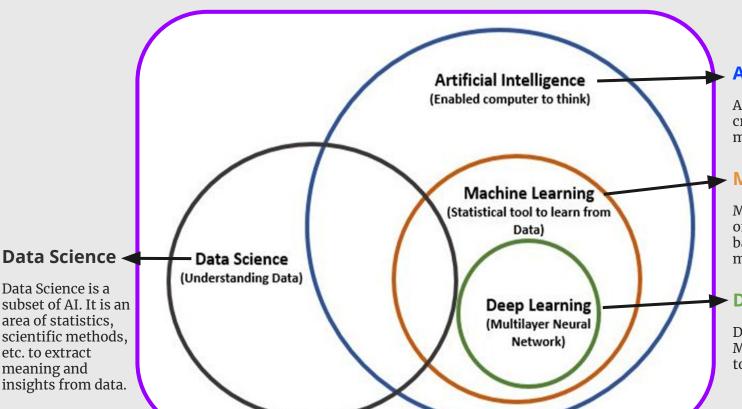

AI

PEOPLE WITH THEIR

DAY TO DAY WORK

What fits into AI?

etc. to extract

meaning and

Artificial Intelligence

Artificial Intelligence means creating smart machines to mimic human behavior.

Machine Learning

Machine Learning is a subset of AI and builds a model based on training data to make predictions.

Deep Learning

Deep learning is a subset of ML, a class of ML algorithms to solve complex problems.
